HANDBOOK

The COVID-19 like human disaster has occurred. It is time for human to unite and put together our idea and wisdom about how we can take chance from this risk. The world seems to be superficially responded in the number of confirmed case, prevention of epidemics, and development of vaccines and medicine treatment. Also, we only clamor about current situation and just look turn away the root cause. What a foolish life is it the time and effort to vain? In fact, the problem seems to be elsewhere, not Corona virus. Global warming which just lead to massive epidemic and ecological destruction has continues. All living things are in the climate and are connected to each other. The world is enough for need, but not enough for covetousness. I expect that the more infectious disease will be spread rampantly in the future because of greed and haughtiness from anthropocentrism and materialism.

Due to high level industrialization, the metropolitan area serves as the epicenter of the virus. Since the Western Industrial Revolution has started 250 years ago, now it has become a truly miserable world that there are full of people wearing masks. Now, 22.5 billion livestock and 7.7 billion human became their shelter to live. As long as we destroy forests (it makes the animals come down the town), do factory farming on a large scale, and live densely in the big city, the global warming will accelerate. As a result of this, humanity will be the food of parasites called viruses. Of course, vaccines and treatments must be developed. Also, the system such as AI technology and big data that manage virus infections must be prepared.

The revolution of future communication is Internet, the revolution of energy is renewable energy, and the revolution of transport is the electric motor and battery vehicle. For the word of STAISFACTION(満足) in Eastern Character in Corea is included letter meaning of FOOT and when we go on foot will be satisfied for health and reduced carbon dioxide^{Co2}. We created and acting 12 slowlife styles as a code of conduct in Corea. As more fundamental measures, there are renewable energy, biking and walking rather than cars, staying dark rather than turning on the light, eating less meat and throwing away less trash etc. Owing to appetite for meat, livestock accounts for 15% of greenhouse gas emissions by humans and one third of the world's grain is used for livestock feed. The meat substitutes with non-GMO need to be developed to eat less meat.

Such as a criminal economy that destroys nature and steals away livelihood, the digital economy continues to accelerate due to COVID-19. The economy is not in the head of the elite people in the capital market, but in the livelihood of a large number of workers in real labor field. The ecological economy of ordinary people(petit bourgeois) is their own life. In other words, the ecological economy is cyclical economy for nature that means farming with protecting land in small towns as well as the relationship between buying and selling in local business. Our planet is a interdependent earth-democracy and save-democracy that all of species is linked each other. If we respect each other for human right, animal right, plant right, and bacterial rights, all of these can coexist and become healthy. As it's difficult for Corean to travel abroad for a while because of COVID-19, the CCN will publish and promote the handbook which introduces 16 Corean Cittaslow towns and recommends domestic travelers to visit there. I hope that even the members of Cittaslow International find wisdom to overcome difficulties based upon true value of cittaslow like Cittaslowship. In order to truly become a watchman in the global village, I wish that we will open up good and beautiful vision based on creating global community through solidarity as well as communication each other with right understanding of untact trends from Corona virus.
